1. Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions, which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in response to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-12, drawn to client/server classified in class 709, subclass 203.

Group II, claim(s) 13-14, drawn to remote data accessing classified in class 709, subclass 217.

Group III, claim(s) 15-32, drawn to computer network monitoring classified in class 709, subclass 224.

Group IV, claim(s) 33, drawn to computer network managing classified in class 709, subclass 223.

Group V, claim(s) 34-43, drawn to trading, matching, or bidding classified in class 705, subclass 37.

Group VI, claim(s) 44-45, drawn to accessing a remote server classified in class 709, subclass 219.

Group VII, claim(s) 46-53, drawn to electronic shopping classified in class 705, subclass 26.

Group VIII, claim(s) 54-61, drawn to network resource allocating classified

in class 709, subclass 226.

Group IX, claim(s) 62-63, drawn to remote data accessing using interconnected networks classified in class 709, subclass 218.

Group X, claim(s) 64-68, drawn to computer network access regulating classified in class 709, subclass 225.

Group XI, claim(s) 69-82, drawn to computer-to-computer session/connection establishing classified in class 709, subclass 227.

Group XII, claim(s) 83-87, drawn to network computer configuring classified in class 709, subclass 220.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions XII-I are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as at least one local computer provides a user interface and performs local data processing to interact with at least one remote computer which implements data processing (e.g., data management, data sharing) within a generic time-sharing environment in response to the local computer to transfer data between the local computer and the remote computer as supposed to invention II which computers located at distant sites transfer data via at least one dedicated communications line, and invention III which comprising means or

steps for detecting or observing operating characteristics or conditions of computers connected through a computer network or of the network itself, and so on. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
